Verizon Pantech UML295 USB Modem

External Antenna Port Guide

The Pantech UML295 has two antenna ports .
For best results, use port on the bottom / rear of the modem.
Port is located beneath plastic cover. (See pic on right)

NOTE: The adapter cable does not go "deep" into the port.
(See pic below)
DO NOT ATTEMPT TO FORCE IT IN ANY FURTHER THAN IT NATURALLY FITS.
It will look like it's sticking out a bit, but it is connecting and working properly.

External Antenna Port

External Antenna Port

Warning: The UML295 external antenna port can be fragile. Using excessive force when connecting or disconnecting your adapter cable can damaged the modem's internal antenna. To avoid damaging your modem - Be Gentle.
